## HOBBIES

Football
Gaming
Coding
Watching Movies

# MUHAMMAD FARAZ

Software Engineer

## EDUCATION

- **Public School Sukkur**
  **8th - 10th**
  I was a football player in Public School Sukkur and I was a good student as well as in extracurricular activities like PT, Sports. I did a project in my last year of Public School Sukkur to about Gaming in Pakistan.
  I passed out with B Grade in 9th and 10th
- **Gov't Islamia Collage Sukkur**
  **11th – 12th**
  I did pass out with **B Grade** in 11th and 12th. But my football career and coding skill were fading so I started making my project just for time pass.
- **Iqra University, Karachi**
  **2.45 CGPA**
  Bachelor of Science in Software Engineering (BSSE)

## Academic & Personal Projects:

**Background Music Creator with Face Recognition (Final Year Project)**

- Developing an AI-powered application that generates background music based on users' facial emotions using computer vision and machine learning.
- Integrating emotion detection, music generation, and a user-friendly interface into a complete software solution.

**AI Chatbot**

- Designed and developed an intelligent chatbot for an Artificial Intelligence course.
- Implemented conversational logic and natural language processing concepts to provide interactive responses.

**Mobile Shop Management System**

- Developed a desktop-based management system to manage customer records, inventory, sales, purchases, and billing.

- Implemented CRUD operations, reporting, and database integration using Python.

**Python Automation & Utility Applications**

- Built multiple Python applications and automation tools for file management, data processing, and productivity tasks.
- Applied object-oriented programming, error handling, and modular software design principles.

**Java Desktop Applications**

- Developed Java-based applications to strengthen object-oriented programming, GUI development, and database connectivity skills.
- Focused on creating efficient, maintainable, and user-friendly software solutions.

**AI Voice Assistant:**

- Developed a Python-based voice assistant using speech recognition and text-to-speech to process voice commands, announce date and time, and perform web searches.

**BMI Calculator:**

- Built a BMI calculator with automated calculations, BMI category classification, input validation, and error handli

**AI Voice Assistant:** Developed a Python-based voice assistant using speech recognition and text-to-speech to process voice commands, announce date and time, and perform web searches.

- **BMI Calculator:** Built a BMI calculator with automated calculations, BMI category classification, input validation, and error handling.
- **Random Password Generator:** Developed a Tkinter-based GUI application using Python's secrets module, featuring customizable password generation, strength estimation, character selection, and clipboard integration.

- ng.

**Random Password Generator:**

- Developed a Tkinter-based GUI application using Python's secrets module, featuring customizable password generation, strength estimation, character selection, and clipboard integration.

## WORK EXPERIENCE

**Python & AI Developer Intern**
**Craft 4 Dev** | January 2026 – June 2026

Worked as a Python and Artificial Intelligence Developer at Craft 4 Dev, where I contributed to the development of Python-based applications and AI solutions. My responsibilities included designing and implementing machine learning and artificial intelligence features, working with data processing and automation, and integrating AI technologies into software applications. I gained practical experience with Python programming, AI algorithms, machine learning concepts,

OpenCV, and various libraries and tools used for developing intelligent systems. I also collaborated on improving application performance, testing solutions, and developing efficient and user-friendly software.

**Python Programing Intern**
**Oasis Infobyte** | October 2026 – Present

Worked on Python development projects as part of the OASIS INFOBYTE internship, building practical applications to strengthen programming and problem-solving skills. Developed a Voice Assistant for voice-based interaction, a BMI Calculator for health-related calculations, and a Random Password Generator with secure password generation and a graphical user interface. Applied Python programming, input validation, error handling, GUI development, and API integration while documenting projects and managing source code using GitHub.

## SKILLS

- Python Programming
- Java Programming
- Artificial Intelligence (AI)
- Machine Learning Fundamentals
- Computer Vision
- Facial Emotion Recognition
- Chatbot Development
- Software Development
- Desktop Application Development
- Data Structures & Algorithms
- Problem Solving & Debugging
- API Integration
- Git & GitHub
- HTML, CSS & JavaScript (Basic)
- Android Development (Basic)
- Flask
- OpenCV
- Firebase (Basic)
- Visual Studio Code
- Tkinter
- SpeechRecognition
- pyttsx3
- SMTP
- OpenWeather API
- Pyperclip
- Git
- GitHub
